Maximize the Value of SAFe® with Aspire's SAFe® Adoption Services

**Maximize time to market and enterprise productivity
Optimize the transition to SAFe**

SAFe Executive Orientation

This half-day briefing is aimed at organizations exploring whether SAFe is right for them, and seeking senior management buy-in. The session explores the underlying principles, key components and integrated processes of SAFe, the benefits realized by organizations and, and explores typical adoption strategies to realize the benefits in a timely manner.

SAFe Readiness Assessment

For organizations who have made the decision to adopt SAFe, and are about to start SAFe adoption planning.

The SAFe Readiness Assessment will provide guidance on when, where and how to adopt SAFe. This activity will outline an approach strategy for successful implementation, identify potential risks or barriers that may threaten SAFe adoption, and advise on mitigation options.
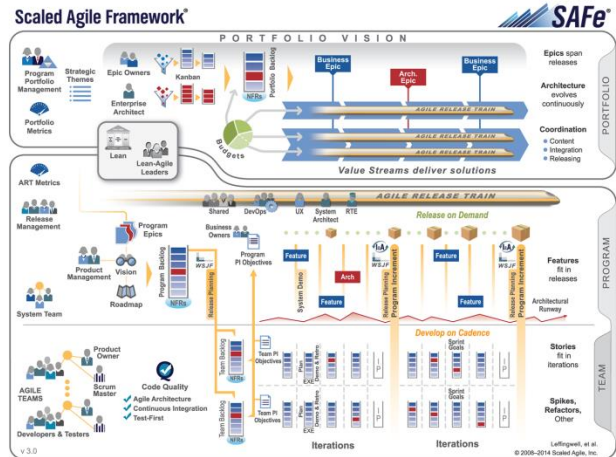

Implementing SAFe – PI Zero

Current State mapping of the organizational capability will drive the development of a Business Blueprint / Concept of Operations and Capability Development Roadmap.

Particular focus is on corporate strategy, business goals & objectives and portfolios of programs and their readiness and ability to implement Agile Release Trains (ARTs). In line with the SAFe model itself, we recommend a Program Increment (PI Zero) as the vehicle and appropriate timeline to perform this activity. This can be adjusted depending upon the state of readiness, situational context and number of programs in scope.

Agile Release Train (ART) Quickstart

Ideal for organizations adopting SAFe for the first time, this (typically) 5 day immersion experience provides SAFe training for 50-125 people, organized as 8-12 newly formed Scrum teams within a common program.

The ART Quickstart serves to align teams to a common enterprise mission and plan the first 8-12 week release or potentially shippable increment (PSI). Business Owners, Product Owners, Scrum Masters and other key and supporting actors are introduced to new principles and practices unique to their new roles within the agile enterprise.

SAFe Certified Training Services

We offer the following courses, all leading to SAFe Certifications:

- Leading SAFe (SA)
- Program Portfolio Management
- Product Manager/Product Owner
- SAFe ART Training & Launch Pack

All of our courses are delivered by advanced SAFe Practitioners and can be tailored to accommodate your specific requirements. We also deliver our training as "just-in-time" workshops, for teams as and when they need it.
